

HONDA JAZZ (GE)

FILTER IS LOCATED BEHIND THE GLOVE BOX

STEP 1

The cabin air filter is located right behind the glove box. To get access to the filter it has to be removed. It will take approximately 10 minutes to replace.

STEP 2

Open your glove box completely and with both hands on each top corner and slide your fingers so force can be applied towards the inside to unhinge the retaining lugs and therefore be able to remove the unit.

STEP 3

With the glove box unit out of the way, the cabin air filter housing is easily recognisable facing right at you. Proceed to unclip both sides as shown and slide it out.

STEP 4

Once the filter is out, clean remaining leaves or dirt from the housing and slide in the new Ryco filter. Refit all components in reverse order.
